The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
normalized rat cell line R3327-5a library cDNA Library Preparation:

(nR5A) constructed in pT3T7 PAC vector according to the procedure described by Bonaldo, Lennon & Soares (Normalization and Subtraction: Two Approaches to Facilitate Gene Discovery. Genome Research 6: 791-806, 1996). The oligonucleotide used to prime first strand synthesis contained the sequence tag GGACTAGATC between the Not I cloning site and dT18 stretch. The Rat Cell Line R3327-5A was provided by Mary Hendrix of the University of

following rat aorta tissues: embryonic day 19, embryonic day 21, adult day 1, adult day 12, adult day 75, adult day 200. For a detailed description of the library from which this clone was derived, please visit our web site at ratest.eng.ulowa.edu. The subtraction has been previously described in (Bonaldo, Lennon and Soares, Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2
The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NoII site and the oligo-dr track served to identify it as a clone from the mormalized rat aorta pool library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through

Consortium/LLNL at: http://image.llnl.gov Series: IRAL Plate: 38 Row: k Column: 11
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 4826749
This clone has the following problem: frame shifted.
                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                   Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                          treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORTI plasmid vector. The DH10B E. coll host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulian Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note="vector: pSPORT1 (Invitrogen); Site_1: Sall; Site_2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs.

Double-stranded cDNAs were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /clone="K0292D03"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note="Organ: kidney; Vector: pSPORT1 (Invitrogen);
Site 1: Sall; Site 2: Not1; Mouse cDNA project by the
Laboratory of Genetics, National Institute on Aging (NIA),
Intramural Research Program, NIH
(http://lgsun.grc.nia.nih.gov/cDNA). This is a
long-transcript enriched cDNA library (Ref. Genome Res.
11:1553-1558 (2001). [PMLD:11544199]). In brief
idouble-stranded cDNAs were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                        coli host was transformed with ligation mixture by the standard chemical method. The average insert size is about 3.0 kb. The library was constructed by Yulan Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /dev_stage="Newborn"

UI-M-DJ2 is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is: GCTACATGAT, subformical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TAG_SEQ=GCTACATGAT"

/note="Vector: pSPORT1 (Invitrogen); Site_1: Sal1; Site_2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). This a long-transcript enriched cDNA library (Ref. Genome Res. II. 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 1488 unfertilized eggs.
Double-stranded cDNAs were synthesized with an Oligo(dT)
